

Teacher Mind At Ease Letter

Dear Teacher,

You're receiving this letter as there is a child in your class who will now be participating in lessons with the help of their AV1.

To make for an easy transition, we wanted to take a moment and explain what this means for you, as well as for the other children in your class. And of course, the student who despite the odds has found a way to continue on their path to an education and stay in touch with much-needed friends.

What is AV1?

Simply put, the AV1 works as an approachable personal avatar for children suffering from long-term illness, helping them to continue their education and maintain the normality of school and friends in their daily lives, from the comfort of their home or hospital bed.

How Does it Work?

The AV1 sits in the classroom and allows the home-based student to hear, see and participate in lessons via a secure connection. The AV1 itself is fully manoeuvrable and capable of turning. This way, they will be able to ask and answer questions, discuss homework and participate in breaks with fellow students. It will feel as though they're right there in the classroom with you!

Interpret and Interact

There are clear light signals that represent each status, including when the child is online, would like to ask a question, or is too ill to participate orally that day.

All it takes is a glance across the room, and you'll be able to notice AV1's current status.

Interact as you would with any other child: no pressing of buttons or connecting to an app. Just talk to AV1 as you would a regular pupil.

We know how busy the life of a teacher can be, and with that in mind, we worked tirelessly to create a learning aid that naturally fits into lessons. All you need to do is plug in the AV1 to charge each evening!

Privacy Promise

When welcoming a new device into the classroom, we understand your number one priority as a teacher and guardian of your students is safety.

“Working with vulnerable children, our number one priority above all is safety.”

Karen Dolva CEO, and Founder

We can proudly and confidently say that AV1 not only meets, but surpasses even the most stringent child

safety requirements, and can guarantee that with multilevel security there is no margin for error.

The AV1 device is password protected, uses encrypted video streams, is accessible in real time only, and locked to a single device.

We pride ourselves on our commitment to child safety, and unwavering company ethos that focuses on improving the lives of children with long-term illness. It's for this reason that we decided to partner with experts in the field of children's healthcare, including the Norwegian Cancer Society, Sunnaas Hospital, St. Olav's Hospital and the University of Oslo.

The Importance of Teachers

A great teacher makes a lifelong impact on their pupil's lives, from inspiring them to achieve greatness and fulfil their potential, to just being there when they're needed the most.

At No Isolation, our goal is to provide you, the teacher, with a greater opportunity to impact the children of the world, and we want to thank you for always being there for the children who need you the most.

Happy Teaching,
Team No Isolation
